

Value Practices in the Life Sciences and Medicine

Edited by **Isabelle Dussauge**, University of Uppsala, **Claes-Fredrik Helgesson**, Linköping University and **Francis Lee**, Linköping University

- A new approach to the study of values; provides inspiration and conceptual tools for empirically examining the values at play in various practices
- Provides an alternative framework for the empirical investigation of the ordering and displacement of values
- Represents a new turn in studying economy and science and will create interest and discussion

This book provides a compelling scholarly statement about the interrelation and pliability of values in the life sciences, medicine and health care. The volume aims to aid our understanding of the roles of power, knowledge production, and economic action in the heavily scientised and economised areas of life science and medicine.
